Customer Journey Map - Metro Ticket Generating System in ServiceNow

Date	28 September 2026
Project Name	Metro Ticket Generating System in ServiceNow
Primary Persona	Metro Passenger / Daily Commuter

Scenario: A commuter wants to book a metro ticket digitally, receive the correct fare, obtain a QR-based digital ticket, travel through the station, and have the ticket verified successfully.

Journey objective: Help the commuter complete the trip with minimal waiting, accurate fare information, clear booking status, and reliable digital ticket validation.

Stage	Entice	Enter	Engage	Engage	Engage	Engage	Exit	Exit	Extend
Steps	Need to travel / choose digital booking	Open ServiceNow portal and ticket catalog	Select starting station, destination, journey type and passenger count	Review auto-calculated fare, choose payment mode and submit booking	Receive request confirmation / processing	Open QR digital ticket	Reach station and present QR	Ticket verification / travel	Check request/history after journey
Interactions	Recognizes need for a faster alternative to counter booking.	Uses ServiceNow Service Portal and opens the metro ticket catalog item.	Interacts with the Starting From, Going To, Type of Journey (Single / Return) and Number of Passengers variables.	Catalog client scripts calculate the fare instantly; UI policies show the matching amount field; passenger selects payment mode and submits.	Flow Designer processes request and booking data is stored.	Passenger opens QR ticket through portal-compatible UI / modal.	Uses mobile device to show the generated QR ticket to station staff.	Station authority verifies ticket details / QR information.	Passenger can refer to request status or booking record if needed.
Digital / Physical Touchpoints	Phone / browser / metro station context	ServiceNow Service Portal	Catalog form + dynamic fields	Fare display (amount fields) + Submit action	REQ/RITM + Flow Designer + Metro Database	QR widget / spModal	Mobile screen + station entry area	Station staff / validation point	ServiceNow request history / ticket record
Goals & Motivations	Help me avoid wasting time in a queue.	Help me reach the booking form quickly.	Help me enter my journey information without confusion.	Help me know the fare is correct before I confirm.	Help me feel confident my booking is being processed.	Help me get clear proof that my ticket is ready.	Help me enter the station without ticket-related delay.	Help me complete verification quickly and accurately.	Help me retain visibility of my booking after travel.
Positive Moments	Digital option is available.	Booking form is centralized and easy to access.	Inputs are guided; stations come from a fixed list.	Fare updates instantly and only the relevant amount field is shown.	Request is created and tracked.	QR ticket is available digitally.	No paper ticket is required.	Verification becomes fast when data is correct.	Booking history remains digitally available.
Negative Moments / Pain	Passenger may still expect a manual counter process.	Portal navigation may be unfamiliar.	Wrong or missing variable population, or choosing the same station twice, can confuse the user.	Fare mismatch creates immediate loss of trust.	Flow failure can delay confirmation.	QR rendering issues can prevent ticket display.	Poor network / device visibility can slow presentation.	Incorrect mapping or unreadable ticket data delays validation.	Limited current integrations reduce post-trip functionality.

Stage	Entice	Enter	Engage	Engage	Engage	Engage	Exit	Exit	Extend
Areas of Opportunity	Promote self-service booking at station entry points.	Provide a direct Book Metro Ticket shortcut.	Use dependent fields, UI policies and validation (such as blocking identical source and destination) for cleaner input.	Show fare breakdown and route details clearly.	Provide clearer success/error state and automated notifications.	Add email/SMS delivery as backup for QR ticket access.	Support offline-friendly ticket display in future.	Add ticket status/validity indicator for station authority.	Add travel analytics, passes, payments and personalized history.

Journey Insight Summary

The most critical trust points in the passenger journey are fare calculation, successful request processing, and QR ticket availability. The strongest opportunities therefore lie in reducing data-entry errors, making the fare transparent, ensuring Flow Designer processing is reliable, and providing a dependable QR ticket experience in Service Portal.
